

MISSION

“Urban Rain Systems believes that access to clean water is not only everyone’s right but also everyone’s responsibility. In line with this ethos, our aim is to give our clients the ability to manage this precious and limited resource responsibly.”

It is this belief that ultimately led us to the creation of the RainCell™ Tank range. A collection of aesthetically pleasing, space saving water storage tanks designed specifically for urban areas. Covering all aspects of water management from rainwater harvesting to domestic water storage.

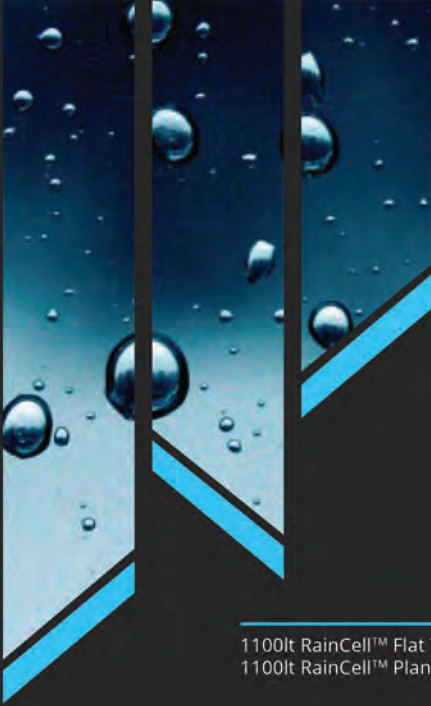

What is Rainwater Harvesting?

Rainwater harvesting is the process of collecting rainwater which falls onto a roof surface and storing it for use at a later stage. By harvesting and utilising rainwater both in and around our homes, we reduce our demand for municipal water, thereby reducing our dependency on dams and water treatment plants. The use of harvested rainwater will also aid in reducing your monthly water bill and making your home more self sufficient and environmentally friendly.

What is Domestic Water Storage?

Domestic water storage is the process of storing fresh municipal water to be used in your home in the event of a municipal water outage. A municipal water outage can be the result of a burst pipe, routine maintenance or a power outage at the pumping station.

1100lt RainCell™ Flat Top Tank

The most cost effective way to get involved in rainwater harvesting is our 1100lt RainCell™ Flat Top Tank. Standing just over a meter tall this compact unit is ideal for town house complexes, court yards or those small unused areas on your property. The 1100lt RainCell™ Flat Top Tank is also perfect for emergency domestic water storage. Capable of storing over 1000lt's of fresh municipal water it is the ideal solution to those frustrating water cuts.

	Length	Width	Height
1100lt RainCell™ Flat Top	2.3m	0.75m	1.06m
1100lt RainCell™ Planter	2.3m	0.75m	1.1m

1100lt RainCell™ Planter Tank

At Urban Rain Systems we are all about aesthetics. The RainCell™ Planter Tank is a true "one-of-a-kind" product. It is the only water tank currently on the market that incorporates a unique self-draining planter basin in the roof of the tank. When placed below a window, this tank allows you to grow small colourful plants that can be seen from inside your home. The planter basin is also ideal for a small organic herb garden. With 1100lt's of harvested rainwater, this tank is ideal for the avid gardener.

All RainCell™ Tanks are supplied standard with the following features:

- o 2 x 40mm BSP Female pump outlets
- o 2 x 20mm BSP Female tap outlets
- o 1 x 70mm Overflow with stainless steel mesh
- o 1 x 450mm Threaded lid/inlet complete with removable stainless steel filter screen

1100lt RainCell™ Tanks are supplied with 1 x 40mm and 20mm BSP outlet only.

2500lt RainCell™ Tank

The 2500lt RainCell™ Tank is the latest creation from Urban Rain Systems. The slim design is perfect for urban areas where the efficient use of space as well as aesthetics is of the utmost importance. Unlike conventional "round" tanks, the 2500lt RainCell™ Tank will not block up walk ways and can be easily installed in passage ways between your home and the boundary wall. This innovative design offers a large storage capacity whilst maintaining a sleek, slim and stylish look. We consider this model to be the ideal balance between volume and design.

5000lt RainCell™ Mega Tank

The RainCell™ Mega Tank has the largest storage capacity in our range, allowing you to store a substantial 5000lt's of water. The RainCell™ Mega Tank is ideal for larger properties or businesses wanting to maximise their water storage capacities, either by means of rainwater harvesting or domestic water storage.

	Length	Width	Height
2500lt RainCell™	2.55m	0.8m	1.9m
5000lt Raincell Mega™	2.75m	1.3m	2.1m
